

DEAD TREES HELP WILDLIFE (Grades 6 & 7)

NAME: _____ DATE: _____

ACROSS:

5. A way to make dying trees safer.
7. One possible disadvantage of providing many nest boxes for a bird species.
8. Possible outcome for a species that cannot adapt to habitat loss.
11. An abundant wildlife food source often found in snags.
12. A potentially good form of disturbance.

DOWN:

1. Positive condition of a habitat that is the result of the presence of many types of life forms.
2. Woodpeckers need this part of a tree to be rotting in order to excavate.
3. Living part of a trunk or branch beneath bark.
4. A family of birds considered a keystone species for other cavity-nesting birds.
6. A small falcon that is a secondary cavity-nester.
10. One decomposer commonly found on snags.
